Flash Memory Toolkit (FMT) is an inexpensive, user friendly, and useful utility that allows you to quickly check your flash drives for errors and test their performance. Also included in the program is the ability to back up your USB flash drives so that you will always have your files safe and sound. While not intended to provide end users with a lot of technical data, FMT is a perfect tool for anyone who has a USB flash drive or any other flash storage device they would like to perform a performance and check for errors test. As the name suggests, FMT offers some tools to check your flash drive's hardware for errors and the program is able to do this by reading the flash drive itself. The application allows you to test the reliability of your USB flash drive by reading it every hour over the course of a week. Check the drive's read and write performance by clicking on the "Benchmark" button from the main page and this tool will automatically begin writing to the flash drive as quickly as possible. Finally, the most important feature of the application, which is by far the only tool that shows information on the flash drive itself, is the one that lets you scan your USB flash drive for errors. The information gathered from the USB flash drive is stored in a folder on your computer. The scan function of the tool allows you to zero in on specific errors on your flash drive. You can view or scan all files on your drive, or only directories. You can of course use the information provided by the tool to fix the errors that you find. Just click on the "Repair" button to instantly fix the errors. The repaired drive can then be used immediately, or the repair process can be cancelled so that you can continue using the drive. FMT also offers a backup feature that is very useful if you ever want to back up your flash drive. FMT will backup a few of the most important files on the flash drive and they can then be saved on your hard drive or other removable media. FMT also has a memory benchmark feature that lets you test and display details such as maximum read and write speeds for the whole USB flash drive. With the performance benchmark, FMT scans the drive for all files and then automatically tests the drive's read and write speed. The "Benchmark" button allows you to upload your USB flash drive to the program and test the performance of the drive. This button will automatically check your USB flash drive and collect data on your drive's
